

Programming Procedure for All Alert & Shelby Remotes:

Step 1: Starting with the ignition in the OFF position, cycle the ignition ON & OFF 3 times leaving the ignition in the ON position on the 3rd time. Example: ON, OFF, ON, OFF, ON.

Step 2: Within 5 seconds press & release the small black push button switch 3 times, holding the button in on the 3rd time. Within about 4 seconds the system will sound the siren or horn 3 times and/or flash the parking lights 3 times. Release the button, you are now in the remote programming mode.

Step 3: Press & release the lock button on the remote that needs to be programmed. The system will sound after pressing the remotes lock button to indicate that the system has learned that remotes signal. Repeat this step for any additional remotes that may need programming.

Step 4: Turn OFF the ignition to exit the remote programming mode. System will sound indicating that it has exited the remote programming mode. Test remotes for successful programming.
