

# HYDROCARBON ABSORBAG

WWMI's advanced hydrocarbon absorbags remove oil-related contaminants from water in recycling systems, oil-water separators and sump pits.

- **Excellent filtration at a minimal price**
- **Models available to fit RGF® Recycling Systems and many oil-water separators**
- **Keeps your system running better with inexpensive filter changes.**
- **Floating "pillow-type" models also available**

## **BENEFITS:**

- **Very cost efficient filtration**
- **Easy to handle and dispose**
- **Vertical round and horizontal square models available**

**Performance:** Water containing free oils enters the filter through the poly mesh support. As the water flows around the randomly oriented, multi-faceted polyisocyanurate foam cells, the free oils are absorbed into the foam. All water is repelled and continues to pass through the filter after the free oils are removed.
